Catalogue of Criteria for Assessing the Funding Eligibility of Open Science Infrastructures

This criteria catalogue and the accompanying assessment questions were developed by a working group of KEMÖ (Kooperation E-Medien Österreich, the Austrian Academic Library Consortium). They are intended to support research institutions and organisations in the evaluation of Open Science Infrastructures. The 20 criteria outlined in the catalogue provide a structured basis for making informed decisions regarding the financial support of these infrastructures.

The assessment questions are intended to be completed by Open Science Infrastructures.
