

# Preserving e-Thesis Resources Pack

The **Preserving e-Theses Resources Pack**, developed by the Digital Preservation Coalition in partnership with the [Open Book Futures project](#), provides practical, flexible guidance to help universities support the long-term accessibility and use of doctoral theses.

As theses become increasingly digital—and often include data, multimedia, code, and web-based content—ensuring they remain accessible and understandable over time presents new challenges. While universities are generally responsible for preserving theses, the way they are prepared and submitted can significantly affect access, use, and reuse in the future. These resources are intended to help staff involved in the PhD submission process understand the need for digital preservation of e-theses and to support students in this area.

The Resource pack can be freely accessed directly from the DPC website:
